Expense Track App

Overview

Expense Track App is a web application developed by using *(Python Flask web framework).* To help the user to manage their personal finances effectively. Many people still rely on tradition way like writing in the book or in a dairy and even in today's world most of the people use to follow method, this method can lead to poor financial decision and lack of spending habits. This app provides simple, systematic, and digital solution to track your daily expense and set reminders for upcoming payments such as EMIs, electricity bills, house rent, and credit card dues

Technology Stack

1) Frontend: HTML, CSS and Bootstrap 5
2) Backend: SQLite Database with SQLAlchemy as ORM
3) Framework: Python flask

Key Features

1) Add and manage daily income and expenses.
2) Set alerts for recurring payments to avoid late fees.
3) View detailed monthly breakdowns for better financial planning.
4) User-friendly interface built with Bootstrap for quick and easy access.

About the Developer

This project was developed by Adhish Biju, a final-year B. Tech in (Information Technology) student, as a part of my portfolio to demonstrate expertise in full-Stack web development using Flask and SQLAchemy.

Benefits of using Expense Track App

Now the users can enter the daily expense day by day making a good financial habit. Users can know where their money is spending a lot on that basis, they can take action to save their money and time, not only adding your daily expense but also you can set the reminders for you upcoming alerts like paying your' s EMIs, Bills and many more to save from any late dues charges making the best app for your Finance.

About Flask

Flask is a python web framework which is mostly used for making small scale or microscale website using python language. The benefit of using the flask framework is that, it gives more user control here the user control means the Developer of the program, whether it's related to security, features and controls, making the flask framework more lightweight, Easy to build and less compactable web Application for fast scale Development.

Let's Take an Overview for the web application
